PROFILE

Full Stack Developer specializing in backend architecture with Java and Spring Boot, and in building dynamic interfaces with Vue.js 3. I currently lead the backend area for Domitila, a corporate ERP system for HR management and social projects, setting architecture, security, and code quality standards for a 5-person development team. I complement this experience with independent, end-to-end software development in the .NET/React ecosystem, demonstrating command of core backend architecture fundamentals independently of the framework.

PROFESSIONAL EXPERIENCE

Backend Lead / Full Stack Developer — FEMETE

May 2026 – Present | Santa Cruz de Tenerife (On-site/Hybrid)

Technical lead for backend and full-stack developer on Domitila, a corporate ERP system for HR management and social projects.

- Technical direction of the backend area, defining system architecture and design guidelines in Spring Boot/JPA for a 5-person backend team (within a 15-person project team).
- Designed and normalized a relational database schema in MySQL with 15+ tables, implementing engine-level automated logic (triggers, computed fields) to ensure the integrity of complex business relationships.
- Established strict development standards for the team: zero native queries, exclusive use of JPQL, decoupling via DTOs, and advanced entity mapping with @MapsId.
- Designed and implemented the system's security and authentication layer from scratch using Spring Security and JSON Web Tokens (JWT).
- Technical mentoring and code reviews for the development team, ensuring consistency across application layers.
- Contributed to the frontend, building dynamic interfaces with Vue.js 3 and global state management with Pinia.

Technologies: Java, Spring Boot, Spring Security, JWT, JPA/Hibernate, MySQL, Vue.js 3, Pinia, Docker, Git

Junior Developer (Internship) — PRODANET INTERNATIONAL

February 2025 – May 2025 | Santa Cruz de Tenerife

- Automated the extraction and structuring of e-commerce data using JavaScript scripts, removing manual processing from the data ingestion pipeline.
- Designed complex regular expressions (RegExp) to clean and normalize unstructured data before loading it into SQL Server, reducing formatting errors in the ingestion pipeline.
- Provided direct technical support to the development team, contributing to issue resolution in scraping and data structuring processes.

Technologies: JavaScript, RegExp, SQL Server, Git

FEATURED PROJECTS

Domitila — *Backend technical lead — Professional project (FEMETE)*

Comprehensive management system with a 15+ table MySQL relational schema, engine-level business logic (triggers, computed fields), and a custom security architecture built with Spring Security + JWT. Team standards: zero native SQL, JPQL, DTOs, advanced mapping with @MapsId.

Stack: Java, Spring Boot, JPA/Hibernate, MySQL, Vue.js 3, Pinia, Docker

Internal corporate project — no public repository.

FitTrack — *Independent, end-to-end development*

Full-stack app for creating training routines, logging workout sessions, and tracking strength progression. JWT authentication with BCrypt hashing, an exercise catalogue with a user request/admin approval flow, and a custom admin panel.

Stack: React 19 + Vite, ASP.NET Core 9 Web API, Entity Framework Core, PostgreSQL, JWT, Docker

GitHub: github.com/prospi-dev/FitTrack | Live demo: fittrack-prospi.netlify.app

BeatHub — *Independent, end-to-end development*

Community-driven review and rating platform ("Letterboxd for music"), integrated with the Spotify API as its data source. Full social system (followers, activity feed), custom JWT authentication, and image management via Cloudinary. Axios interceptors handle session renewal/expiration, and custom debounce hooks optimize calls to the external API.

Stack: React + Vite, .NET 8 Web API, Entity Framework Core, PostgreSQL, Spotify Web API, Cloudinary, Netlify/Render

GitHub: github.com/prospi-dev/BeatHub | Live demo: beathub-prospi.netlify.app

EDUCATION

Higher National Diploma in Web Application Development (DAW) — CIFP César Manrique

September 2023 – May 2025

High School Diploma — Sciences Track — IES Profesor Martín Miranda

September 2020 – May 2022

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, C#

Backend / Frameworks: Spring Boot, Spring Security, JPA/Hibernate, ASP.NET Core, Entity Framework Core

Frontend: Vue.js 3, Pinia, React, Tailwind CSS

Databases: MySQL, PostgreSQL, SQL Server, relational schema design & normalization

Security & Auth: JWT, BCrypt, role-based access control

Architecture & Patterns: Layered architecture, DTOs, REST API design, separation of concerns

DevOps / Tools: Docker, Git, GitHub, Render, Netlify

Other: Regular expressions (RegExp), third-party API integration (Spotify Web API, Cloudinary, EmailJS)

LANGUAGES

Spanish: Native

English: B2 — Certified
